- Full UK based spare parts stock and support available

Product Description

The RR351 Air Con Machine is equipped with the latest technology and is available in either old gas R134A or new gas R1234YF configurations. One of the user's favourite features is the digital touch screen that allows for full control at your fingertips. Many workshops tend to opt for two separate Air Con Machines so you can service two different gas vehicles at the same time, meaning double the revenue!

Kit Includes

- HP and LP hose and quick couplings kit for R134a
- Printer
- Heating belt
- Pipes holder bracket
